509 Illustrated Reference Entries

All 217 Education and Competition Add-On poster references, the 467-file mechanical CAD archive, and verified electronics, cable, pneumatic, and tool supplements. Exact coverage is stated inside.

US Letter | Color | Print at 100% | Revised October 3, 2026

Original CAD geometry and source part names: VEX Robotics. Independently prepared educational reference.

Find a Part

Common sorting families first; specialty archive parts follow in the appendix.

 Beams and Trusses 78 entries	5
 Plates and Sheets 69 entries	19
 Pins and Connectors 56 entries	32

How to Use This Guide

Identify first, then count and label.

Match the Shape and the Full Name

Start with the family color and picture. Read the whole name, including length, tooth count, left or right, capped or uncapped, and variant suffix. E and A badges mark Education and Competition Add-On poster membership; EA means both. These entries appear first within families.

Count Only What Is Physically Present

Count and Bin are intentionally blank. Record the parts physically present in your classroom. Kit badges, kit quantities, and pack sizes do not establish ownership. Keep uncertain, damaged, or unmatched items aside for a second pass.

Keep Similar Variants Separate

One ID can have more than one supplied CAD configuration. The four hub-variant entries for 228-2500-1960 and 228-2500-1961 retain their separate source filenames. Names such as v1, Weak, Strong, and Use 468 are preserved source labels, not new safety or strength claims.

Use Cards as Bin References

Each six-card page uses a repeated grid. For separate bin cards, print that page single-sided, cut along the light card borders, and laminate if useful. Write your own bin code before attaching a card. These are reference cards, not a fitted adhesive-label template.

Print the Pages You Need

Print in color on US Letter at 100% or Actual Size. Use long-edge duplex for the guide; print cut cards and dividers single-sided. For the current-kit poster references, use pages 6-16, 20-22, 33-39, 44-46, 50-52, 60-64, 72-73, 77-79, 85-87 (40 card pages, with 23 additional archive entries sharing those pages). Earlier electronics and other archive parts are elsewhere. Pictures are not life-size.

Read the Color Note

The PDF uses family colors for navigation. CAD Appearance means color data was recovered from the source model; Neutral Reference Finish means no dependable model color was available. Neither establishes every physical color sold or owned.

Coverage and Important Distinctions

A dated reference with an explicit source boundary.

Covered References

This guide has 509 illustrated entries: 490 illustrated from genuine CAD and 19 using official product images or poster illustrations. All 217 distinct references in the Education and Competition Add-On posters are represented. These poster references overlap the broader archive; they are not 217 additional parts.

Source Boundary

The mechanical reference covers all 467 STEP files in VEX-IQ-All-Parts-2024-11-08.zip, representing 465 unique filename IDs. Supplementary official sources supply current and earlier controls, additional kit parts, cables, pneumatics, and the pin tool. The total contains 506 distinct recorded source part IDs, one unresolved USB identity, and two additional hub configurations.

What Coverage Means

Coverage is complete against these stated sources. It does not establish every IQ product ever made, every current retail product, every physical color, every kit, or every classroom possession. Source membership does not establish current availability. Source disagreements remain visible in the cards and notes.

Dimensions and Color

Nominal sizes, tooth counts, and variants come from source names. Normal mounting-hole spacing is 12.7 mm or 0.5 in; some center rows are offset by half that spacing. Pictures are independently fitted and are not to scale. CAD color is an identification aid, not verification of physical product color.

IDs and Quantities

A source part ID is not automatically a retail pack SKU, order number, or count per kit. Do not combine distinct IDs because their shapes look alike. Blank Count and Bin fields are reserved for your physical inventory. The simulated CAD cable-pack model is excluded from counted entries.

Scope Outside This Volume

EXP and V5 are planned for a separate volume. Field and game elements, packaging, consumables, every color variant, and products absent from the stated sources are not promised. Similar-looking interfaces do not establish interchangeability.

Beams and Trusses

Family Divider

78 Reference Entries

Compare straight, angled, offset, and locking shapes. Keep left and right variants separate until their IDs are checked.

Part ID Index

Full source IDs with page numbers. Duplicate IDs retain their separate model variants.

Part ID	Page	Part ID	Page	Part ID	Page
228-7726-001	92				
228-7726-002	92				
228-7728-001	91				
228-9136	87				
USB Cable (2 m)	87				

Source Notes and Unresolved IDs

Keep these distinctions with the matching cards when sorting or ordering parts.

USB Cable Identity Is Unresolved

The Education poster identifies the 2 m USB-A to USB-C cable as 228-6961-001. The Competition Kit BOM uses 228-6961-002, and the Education Kit BOM uses 228-6960-001. The card shows the official kit illustration and does not choose one conflicting ID. Verify the physical cable and length before ordering.

Rubber Treads and Intake Belts Remain Separate

The poster uses 228-2500-1963 for the 40-tooth rubber tread and 228-2500-1964 for the 56-tooth tread. The product BOM uses 228-2500-1960 and 228-2500-1961 for small and large rubber intake belts. These are unresolved source disagreements. All source-specific entries remain visible; do not add their counts together without inspecting the actual parts.

Two Hub Configurations per Archive ID

The mechanical archive supplies both a 1950 Hub and a 1953 Hub configuration for each of 228-2500-1960 and 228-2500-1961. The index marks these as (1950) and (1953). These four drawings are two IDs in four supplied configurations, not four independently verified retail products.

Smart Motor Source Suffixes

The CAD archive uses 228-2560, the poster uses 228-2560-850, and the product BOM uses 228-2560-000 for the named Smart Motor. One card preserves these source identifiers. The suffixes are not presented as separate hardware generations or extra classroom motors.

Corrected Source Typos

The omni-wheel card uses individual part ID 228-2536-000, verified on its product page. The Education poster typo is 228-2500-2536; 228-2536 is the retail 2-pack SKU. The strong shock absorber uses 228-2500-1480, rather than the malformed BOM text 228-2500--480.

Identification and Source Links

E identifies Education Kit poster membership and A identifies Competition Add-On poster membership. The family grouping is an organizing aid, not a manufacturer category. Each card ID links to its source when this PDF is used digitally. Original source names remain preserved in the catalog data; clarified electronic display names distinguish verified generations.

Older Controller CAD Qualification

The original Controller model 228-2530 carries a solid-validity warning. Its complete image is usable for identification; the CAD is not verified for manufacturing.

Sources and Attribution

Educational Use and Attribution

VEX Robotics owns the source CAD geometry, product names, and related marks. This independently prepared guide uses original renders for personal and educational identification and inventory work. It is not an official VEX publication and does not grant a new license to the vendor geometry. Retain this attribution and the source links with copies. Source data and family grouping do not establish owned quantities, product availability, material strength, or compatibility.

Classroom Inventory Summary

Optional worksheet. Transfer only physically counted totals and assigned bin locations.

Room _____ Counted By _____ Date _____

Family	Bin Codes	Count or Follow-Up
Beams and Trusses		
Plates and Sheets		
Pins and Connectors		
Standoffs and Spacers		
Shafts and Retainers		
Gears and Motion		
Pulleys Belts and Rope		
Wheels Hubs and Treads		
Electronics and Control		
Pneumatics		
Specialty and Design Parts		

Unmatched or Damaged Parts
